Claims

- 1. (Cancelled) An apparatus comprising:
- at least one bar;
- a sleeve sized to fit over the at least one bar, the sleeve comprising a nub having substantially the same width as the at least one bar; and
- a movable assembly comprising a spindle and a bracket, the bracket sized to fit over either of the at least one bar and the nub.
- 2. (Cancelled) The apparatus of claim 1, the movable assembly further comprising: a drive axle coupled by way of gears to the spindle, the gears configured to amplify a torque applied to the drive axle and to apply the amplified torque to turn the spindle.
- 3. (Cancelled) The apparatus of claim 2 further comprising: the movable assembly configured for mounting a power drill with a chuck of the power drill positioned to receive the drive axle.
- 4. (Cancelled) The apparatus of claim 1, the at least one bar and the sleeve further comprising holes which when aligned may receive a pin to secure the at least one bar within the sleeve.
- 5. (Cancelled) The apparatus of claim 1 in which the sleeve is sized to receive a bar of a standard trailer hitch.
- 6. (Cancelled) The apparatus of claim 4, the nub and the bracket further comprising holes which when aligned receive a pin to secure the movable assembly to the nub.
- 7. (Cancelled) An apparatus comprising:

a boom comprising at least one bar and sleeve; and a movable spindle;

the sleeve having a nub sized to mount the movable spindle.

- 8. (Cancelled) The apparatus of claim 7 wherein the sleeve comprises a nub having a width substantially the same as the width of the bar, and wherein the movable spindle comprises a mount sized to receive a width of either the bar and the nub.
- 9. (Cancelled) The apparatus of claim 7 wherein the movable spindle comprises a drive axle and gears to step up a torque applied to the drive axle to turn the spindle.
- 10. (Cancelled) The apparatus of claim 7 wherein the drive axle is adapted to receive the chuck of a power drill.
- 11. (Previously Presented) An apparatus comprising:
- a sleeve sized to fit over a bar, the sleeve comprising a nub having substantially the same width as the bar:
- a movable gearbox assembly comprising a mount to receive a power drill and a bracket sized to fit over either of the bar and the nub;
- a mechanism to depress a power switch of the power drill when the power drill is mounted to the gearbox assembly; and
- a foot pedal assembly to couple the power drill to a power source when the foot pedal is operated.
- 12. (Original) The apparatus of claim 11 further comprising:
- a base assembly comprising a pivot for setting the angle of the boom, the boom comprising at least one bar and sleeve.

- 13. (Previously Presented) An apparatus comprising:
- a base assembly comprising a pivotable base bar;
- a boom comprising a sleeve sized to fit over an end of the base bar at a first end and to fit over an end of an extension bar at a second end, the sleeve comprising a nub having substantially the same width as the extension bar; and
- a movable spindle assembly adapted to mount over either the extension bar or the nub of the sleeve.
- 14. (Previously Presented) The apparatus of claim 13 further comprising: a foot pedal which, when operated, provides power to a torque source to turn the spindle.
- 15. (Previously Presented) The apparatus of claim 13, further comprising: a first pulley assembly coupled to the boom and a second pulley assembly coupled to the first pulley assembly, the first pulley assembly comprising a first pulley axle substantially orthogonal to a second pulley axle of the second pulley assembly.
- 16. (Previously Presented) The apparatus of claim 15 further comprising:
- a bushing assembly comprising a bay; and
- a bushing having a lengthwise opening aligned with the bay.
